

Introducing the
infinitely adaptable
web-based personal
insolvency platform

Aquarium... an entirely bespoke personal insolvency platform delivered at a price tailored to your budget

AQUARIUM
we're ready

Compliance with the latest process and regulatory requirements of the Insolvency Service of Ireland (ISI) is mandatory. But these requirements are likely to be further redefined in both the immediate and long term future.

So, the software platform you choose now has to be flexible enough to meet, not just the ISI's continuing expectations, but to deliver the changing nature of functionality your company demands.

The **Aquarium** Personal Insolvency Platform

Founded in 2006, Aquarium has built an international reputation for developing a new breed of software solutions that enable businesses – particularly in the financial and legal sectors – to optimise their end-to-end operation... from customer acquisition to ongoing service and support.

The core of our success lies in designing and delivering modular solutions, allowing us to adapt easily to the industries in which our clients are active, and then create entirely bespoke packages to meet their individual needs.

In the insolvency field, this means we've invested heavily in understanding the broad market, the regulatory requirements, and the specific business processes that are vital to your success. The result is the Aquarium Personal Insolvency Platform.

Knowing the **market...** and knowing when to change

Aquarium's Personal Insolvency Platform is designed to reflect the ISI's requirement that each customer, irrespective of the company providing the service, will follow the mandated steps... resulting in correct procedures, fair treatment, and a fully compliant and auditable case history.

Beyond this, the Aquarium Platform adapts to incorporate all your specific process requirements too, as well as alert notifications and the ongoing communication encompassed by the underlying regulatory procedures.

Crucially, Aquarium is designed to evolve perfectly as regulations change and as you come to terms with the key process requirements these changes will bring... and all without the need for further software development. In effect, you remain absolutely up to date... at all times.

Features

- Eligibility checklist (Section 91 Insolvency Act)
- Integrated document production
- Calculated total set costs based upon client circumstances
- Decision engine – ensures the correct advice is provided to a potential client
- Repayments table
- Voting rights calculated by automation
- Mortgage restructure calculator
- Production of 'Proof of Debt', PIP proposal and bankruptcy documentation

Capabilities

- ISI case import
- Workflow driven and compliant processes
- Document and diary management
- Customisable reporting suite
- Portal access for clients and auditors
- Full breakdown of assets, creditors and excluded debts
- Bank reconciliation
- Credit control processes and alerts
- File audit trail

Serious **cost efficiencies** too...

Last, but not least, saving you money!

Because your Aquarium platform is designed uniquely to mirror your business process, you're able to operate with maximum efficiencies and enjoy all the cost savings this will bring.

And remember, you're investing in an infinitely flexible solution...not in the cost of developing the software. It's our job to keep your platform compliant and in line with your own process requirements. It's your job to make the most of the advantages this can bring.

We have one chance to **get this right**

We have looked to the way other countries have dealt with these issues, especially over the water to the UK. We simply have to learn from other jurisdictions and that is what we are committed to doing.

The crisis we have here means we do not have the luxury of five years to get this right – people are struggling and we have to be in a position to help them...and now.
